Website: www.sevabharatipurbanchal.org

About us

The Seva Bharati Institute of Fire, Safety & Disaster Management (SBIFSDM) was set up by Seva Bharati Purbanchal, a leading social service organisation of North-east India. The institute functions from Yognilayam located at Abhaypur opposite North Guwahati Police Station, Guwahati-781031. All the successful students of the 1st batch have found employment as safety officer/safety supervisor in different organizations in and around Guwahati even before the final results were declared by the Assam Science and Technology University (ASTU).

About the Course

Despite good design, standard operating procedures and advisories, accidents at work continue to occur, causing injury to personnel or damage to assets or the environment. They also disrupt work, cause loss of resources or production, project delays etc. leading to economic downturn.

To address the above, Managements require appropriately qualified and trained professionals known as Safety Officers, Safety Supervisors, Safety Engineers or Safety Managers who act as the eyes of the organisation to prevent loss events, sensitise personnel to their effects, assist in preparing emergency management plans, minimize potential losses and analyze incidents to improve systems and procedures. The need to employ such professionals is also stipulated in statutes such as the Occupational Health, Safety and Working Conditions Code, 2020, the Assam Factories Rules, 1950 etc. which specify “recognised” qualifications for employment.

Seva Bharati Institute of Fire, Safety & Disaster Management (SBIFSDM) brought to Assam its first “recognised” and quality learning programme in safety and allied areas. Its Advanced Diploma in Occupational Safety, Health and Environment has been granted affiliation by the Assam Science and Technology University (ASTU). The course syllabus is designed to qualify students for employment as Safety Officers / Safety Supervisors in industry / infrastructure / service sectors as required vide the above regulations.

Besides delivering learning modules in classrooms, demonstrations, practice, site visits, guest lecturers etc. are included to supplement classroom learning.

Duration & Methodology

This is a FULL-TIME 2-semester course (following an ASTU-approved syllabus) that aims to provide comprehensive education and training with emphasis on the practical aspects of the work of safety professionals.

The first semester comprises classroom learning, site visits, demonstrations, practice etc. In the second semester, students attend industrial internship.

Students' learning is assessed both through continual assessment and END-SEMESTER examinations. Students need to attend at least 75% of all classes.

The academic session for the third batch will commence in July-August 2024. Classes are conducted on all week days. Extra sessions or industry visits may also be scheduled on weekends depending on requirements.

In the Second semester, students will be required to intern in two separate industries/service/ infrastructure sites, work on a specific project and prepare a detailed report thereof. The institute will help students select internship and project organisations. The medium of instruction and examination will be ENGLISH

Entry Requirements (Any one of the following)

Batch Size : 20
